

'Sylva 4' is delivered by a special crane-lorry '(Hiab' type) system:

1) A Sylva 4 being lifted on the crane lorry at our Downton warehouse

2) This picture shows the space required for the crane lorry with its 'outriggers'

3) Sylva 4 on board and ready to be delivered to its new owners

4) This picture shows the maximum range of the crane – under ideal conditions. Note that different vehicles/cranes may be used, and that site conditions at delivery address may considerably reduce the crane's safe working range.
